Addendum

Antenatally diagnosed congenital diaphragmatic hernia in Singapore: a five-year series
Lee SY, Tan KH

A digitally enhanced Fig. 3 is added for greater clarity. The approximate area of the lung was calculated by multiplying the two longest perpendicular diameters of the lung.

Fig. 3 US images show the dimensions of the (a) lung and (b) brain. These images were used for the calculation of the lung-to-head ratio – dividing the area of the lung by the circumference of the head (i.e. \[\frac{1.77 \times 1.39}{20.26} = 0.121\]).
